IN THE CLAIMS

The following listing of the claims is provided in accordance with 37 C.F.R. 1.121:

1.-4. (canceled).

Please A

5. (original) A method for resetting a state of charge (SOC) calculation for a designated energy storage bank of an energy storage system of a vehicle, the method comprising:

during operation of the vehicle, completely discharging and completely charging the designated energy storage bank;

maintaining the designated energy storage bank at a predetermined high terminal voltage for a specified period of time; and

following said specified period of time, defining a calculated, reset SOC for the designated energy storage bank to be a known SOC capacity.

- 6. (original) The method of claim 5, wherein said completely discharging the designated energy storage bank further comprises discharging energy from the designated energy storage bank to at least one of: one or more available energy storage banks in the energy storage system, a vehicle motoring operation, and a resistive grid.
 - 7. (original) The method of claim 6, wherein:

said one or more available energy storage banks are a preferred discharging sink for the designated energy storage bank over said vehicle motoring operation and said resistive grid; and

said vehicle motoring operation is a preferred discharging sink for the designated energy storage bank over said resistive grid.
